

☑ Assignment 1: Weather Info Servlet (Weather Domain)

Problem Statement:

Create a servlet `/weather` that accepts a city name as a parameter and displays dummy weather data for that city.

Requirements:

- Accept a query parameter `city`.
- Validate that the city name is not empty.
- Display hardcoded temperature, humidity, and forecast info based on city name.
- Return error message if city is invalid.

Sample URL:

`http://localhost:8080/weather?city=Delhi`

☐ Assignment 2: Currency Converter (Finance Domain)

Problem Statement:

Develop a servlet `/convert` that converts an amount from one currency to another using static conversion rates.

Requirements:

- Accept query parameters `amount`, `from`, and `to`.
- Use hardcoded conversion rates (e.g., USD to INR = 83.0).
- Validate parameters and show formatted result.

Sample URL:

`http://localhost:8080/convert?amount=100&from=USD&to=INR`

☐ Assignment 3: Course Catalog Viewer (Education Domain)

Problem Statement:

Build a servlet `/courses` that shows courses based on department name.

Requirements:

- Accept a parameter `department` (like CS, ME, EE).
- Display relevant course list using if-else or map structure.
- Show error if department doesn't exist.

Sample URL:

`http://localhost:8080/courses?department=CS`

□ Assignment 4: Movie Rating Summary (Entertainment Domain)

Problem Statement:

Create a servlet `/rating` that returns the rating summary of a given movie.

Requirements:

- Accept query param `movieName`.
- Show movie rating, genre, and reviews from a hardcoded list.
- Handle unknown movie case.

Sample URL:

`http://localhost:8080/rating?movieName=Inception`

□ Assignment 5: Product Stock Checker (E-Commerce Domain)

Problem Statement:

Create a servlet `/stock` that takes `productId` as input and displays whether it is in stock.

Requirements:

- Accept `productId` as a query parameter.
- Use a map or list to simulate product inventory.
- Return product name, availability, and stock count.

Sample URL:

`http://localhost:8080/stock?productId=1023`

✓ 1. Domain: Education - Student Registration Form

Servlet Name: `StudentRegistrationServlet`

Problem Statement:

Create a form that collects student information like name, email, age, and selected course. On submission (using POST), the servlet should validate the inputs:

- Name and email must not be empty.
- Age should be ≥ 18 .
- Course must be selected.

Display either a success message with submitted info or appropriate validation errors.

✓ 2. Domain: E-commerce - Product Feedback Submission

Servlet Name: `FeedbackServlet`

Problem Statement:

Design a feedback form where users provide:

- Product ID
- Rating (1 to 5)
- Review (text)

On POST submission, the servlet should:

- Validate rating is within 1-5.
 - Ensure review text is not empty.
 - Store the feedback (in-memory list or print to response).
 - Return a thank you message with product ID and rating.
-

✓ 3. Domain: Banking - Fund Transfer

Servlet Name: `FundTransferServlet`

Problem Statement:

Create a form that allows:

- Source Account Number
- Destination Account Number
- Amount to Transfer

On form submission:

- Validate that both accounts are not the same.
- Amount is positive and $\leq ₹50,000$.
- Return a success/failure message showing transaction details.

No actual DB needed—use dummy data validation.

✓ 4. Domain: Job Portal - Resume Submission

Servlet Name: `ResumeUploadServlet`

Problem Statement:

Create a form for users to submit:

- Name
- Email
- Resume (textarea or file input — optional, depending on setup)
- Skills (comma-separated)

On POST:

- Parse and display a structured resume preview.
- Validate email format, name length, and at least one skill.

For file upload, optionally integrate Apache Commons FileUpload.

✓ 5. Domain: Event Management - Conference Booking

Servlet Name: `ConferenceBookingServlet`

Problem Statement:

Create a booking form for a conference with fields:

- Attendee Name
- Email
- Number of Seats
- Date of Attendance
- Session Type (Dropdown: Technical, Workshop, Networking)

Upon submission:

- Validate seats ≤ 5 per user.
- Check for valid date format (optional).
- Return a formatted ticket confirmation message.
