Q1. Sort Candidates by Name, then by Age

❖ Problem:

Create a class `Candidate` with:

- `String name`
- `int age`

Sort a list of candidates:

- First by `name` (alphabetically)
- Then by `age` (ascending), if names are equal.

❖ **Hint:** Use a custom `Comparator<Candidate>` and `compare()` with both fields.

◆ Q2. Sort Flights by Fare (Descending)

❖ Problem:

Class `Flight` has:

- `String airline`
- `double fare`

Sort a list of flights by:

- `fare` in **descending order** (highest fare first).

❖ **Hint:** Use `Double.compare(f2.fare, f1.fare)` to reverse the order.

◆ Q3. Sort Movies by Year (Descending), then Title (Ascending)

❖ Problem:

Create a `Movie` class with:

- `String title`
- `int year`

Sort a list of movies:

- By `year` (latest first)
- If same year, then by `title` (A to Z)

◆ Q4. Sort Products by Category then by Price (Ascending)

◈ Problem:

Create a `Product` class with:

- `String category`
- `String name`
- `double price`

Sort all products:

- Grouped by `category` (A to Z),
- Within each category, sort by `price`.

◆ Q5. Sort Transactions by Amount (Descending), Fallback to ID

◈ Problem:

Class `Transaction` with:

- `int id`
- `double amount`

Sort by:

- `amount` (high to low)
- If equal, sort by `id` (ascending)
